Temenos Continuous Deployment

Take your changes to market faster with Temenos Continuous Deployment – unleashing the capabilities of your teams to configure, test, and deploy change at accelerated speeds.

Temenos
Continuous Deployment

Take your changes to market faster with Temenos Continuous Deployment – unleashing the capabilities of your teams to configure, test, and deploy change at accelerated speeds.

Change is challenging. In banking, keeping pace can take considerable effort - and the capability to introduce new features and functions for an increasingly demanding customer base is a key enabler to achieving business and market goals. With the growing impetus towards delivering on digital banking strategies, a cohesive DevOps strategy is now even more critical to gain and retain a competitive edge in an increasingly crowded market.

Temenos' Continuous Deployment services are transformative solutions for banks wanting to expedite project delivery timelines – the self-service and self-management functions enable banks to control the pace and costs of the environments, and the speed with which they progress through their development plans, from configuration to full test.

Temenos has always been able to support the development efforts of client banks. Temenos has industrialised development and testing services and created **Extend** and **Assemble**. These streamlined functions allows banks to commence their cloud journey at any point along the software development lifecycle.

The value of these services, combined with the power of Temenos software, make for a compelling proposition for any bank or Financial Institution seeking to move fully to the cloud, or take a first tentative step into it.

Temenos and the
Software Development Lifecycle

Temenos Continuous Deployment is provided via service modules which include capabilities to create and manage environments and test and triage development efforts. Continuous deployment with Extend allows clients to perform desired software configurations using provided tools in self-provisioned, self-managed environments.
The team can then progress into Assemble where teams can consolidate development efforts, run through testing cycles, review test results, and triage back to configuration environments for continued development.

Assemble and Extend are available either during implementation or post-go live and all Temenos software can be provided in the environments.

Following a successful testing cycle, banks can select deployment into live production either on their own cloud, on-premise, or Temenos SaaS can run the service on the banks behalf.

TEMENOS CONTINUOUS DEPLOYMENT

| EXTEND	ASSEMBLE	DELIVER
Extend your Temenos software functionality	Bring together configuration and local developments	Run your SaaS banking service from the Temenos SaaS

Temenos Continuous Deployment includes:

Cloud Native
the entire solution is provided on the cloud, making it easier to for users to access and highly cost effective. Banks can also select to run part of the service on their existing cloud subscription, or elect to have Temenos SaaS provide the full Continuous Deployment.

Self management
Users can provision and operate at a self-managed pace, creating environments on demand and executing testing on their own timetable. Extend automates the environment creation, and users can request an environment and get web access to all required software in minutes, all accessed by a secure, self-service portal.
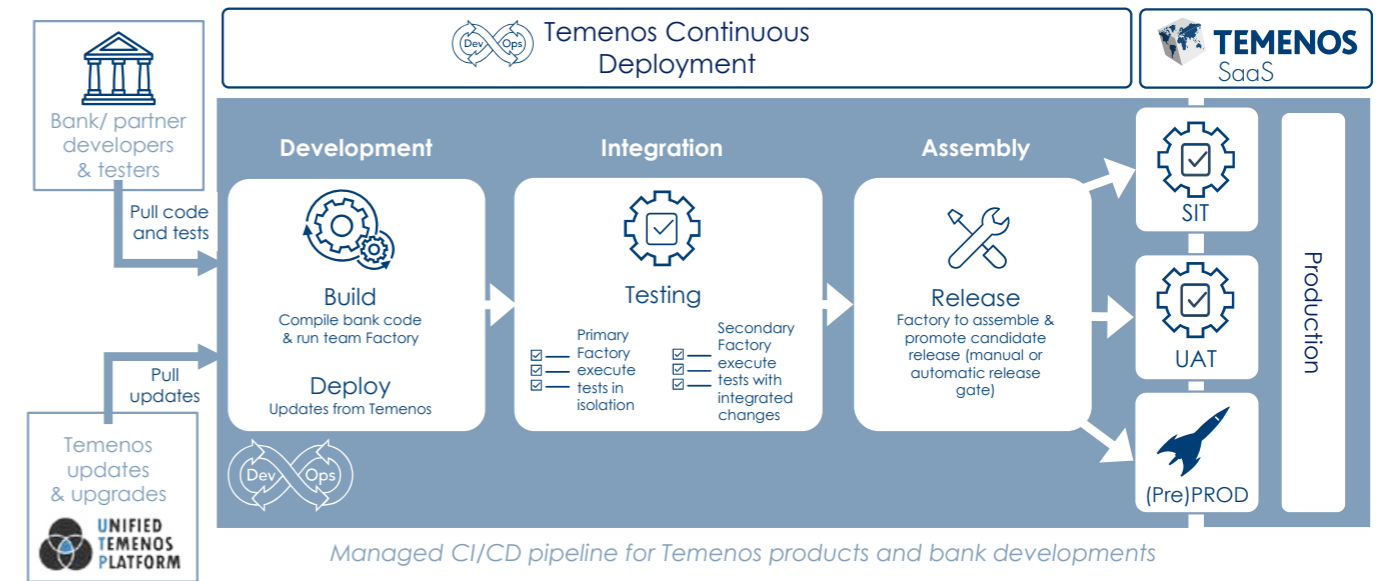

Reporting and Insight:
Provision of metered usage, logs, and reporting to track and gain insight into activity. Dashboards provide quick feedback loops to the team as well as test reports for all test factories. Drill down to individual test results and application logs for further investigation. Review pass rates and trends with time, and across all projects.

Dashboard examples:

Efficient environment creation and management
Create new environments on demand in minutes with all the components installed in order to progress manual runs, or provision an environment with all components installed and required testing factories. Develop and test against production-like systems. Configuration repository for automated deployment of code, design studio packages and plugins.

> " Thanks to Temenos' innovative continuous-deployment product, we can gain greater product agility and improved time-to-value, accelerating the speed of innovation and making business changes rapidly. Temenos Continuous Deployment is to provide high levels of automation to support our agile development approach. Continuous Deployment will allow our developers to focus more time on the value of their deliverables spending less time coordinating testing and deployment with other teams."

Friso Westra, Head of IT Development Core Banking International of ABN Amro

Technical architecture – move seamlessly from configuration to testing, to live production

Managed CI/CD pipeline for Temenos products and bank developments

Temenos Continuous Deployment delivers:

Rapid Acceleration
Run any project at your own pace with self-provisioned, self-managed environments, created on demand in minutes. Increase test cycles, and speed up testing turnaround. Amplify feedback loops, and find and fix identified issues sooner with triage features including reporting with details of change, test results, and logs. Create new environments on demand with all the components installed in order to try manual runs, or provision an environment with all components installed and required testing factories.

Increased stability
Our clients get to market faster with increased stability; using the same concepts proven within the testing and delivery of Temenos' own sophisticated product release process, running hundreds of thousands of tests daily. Assemble, for the first time, gives clients access to the Continuous Integration and Continuous Deployment processes Temenos use, and to optimise their processes and workflows.

Cost Management
Reduce your cost of innovation and total cost of ownership. The subscription based fee structure eliminates the need for costly infrastructure, freeing your IT funds without compromising project timelines or quality. Maintain controls with limits on the number of environments accessible to your team.

Unrivalled expertise
Temenos services, Temenos products, all supported by the expertise of the Temenos SaaS team. No other provider has been support banking in the cloud as long as Temenos and there is no better combination of expertise to ensure the smooth delivery and running of your managed cloud services.

Seize
the opportunity

With Temenos Continuous Deployment, a new capability for is born for banks.

Find out more about Continuous Deployment, and how Temenos can optimise your DevOps capabilities - and eliminate change as one of your challenges.
