

AI Driven Data De-Identification

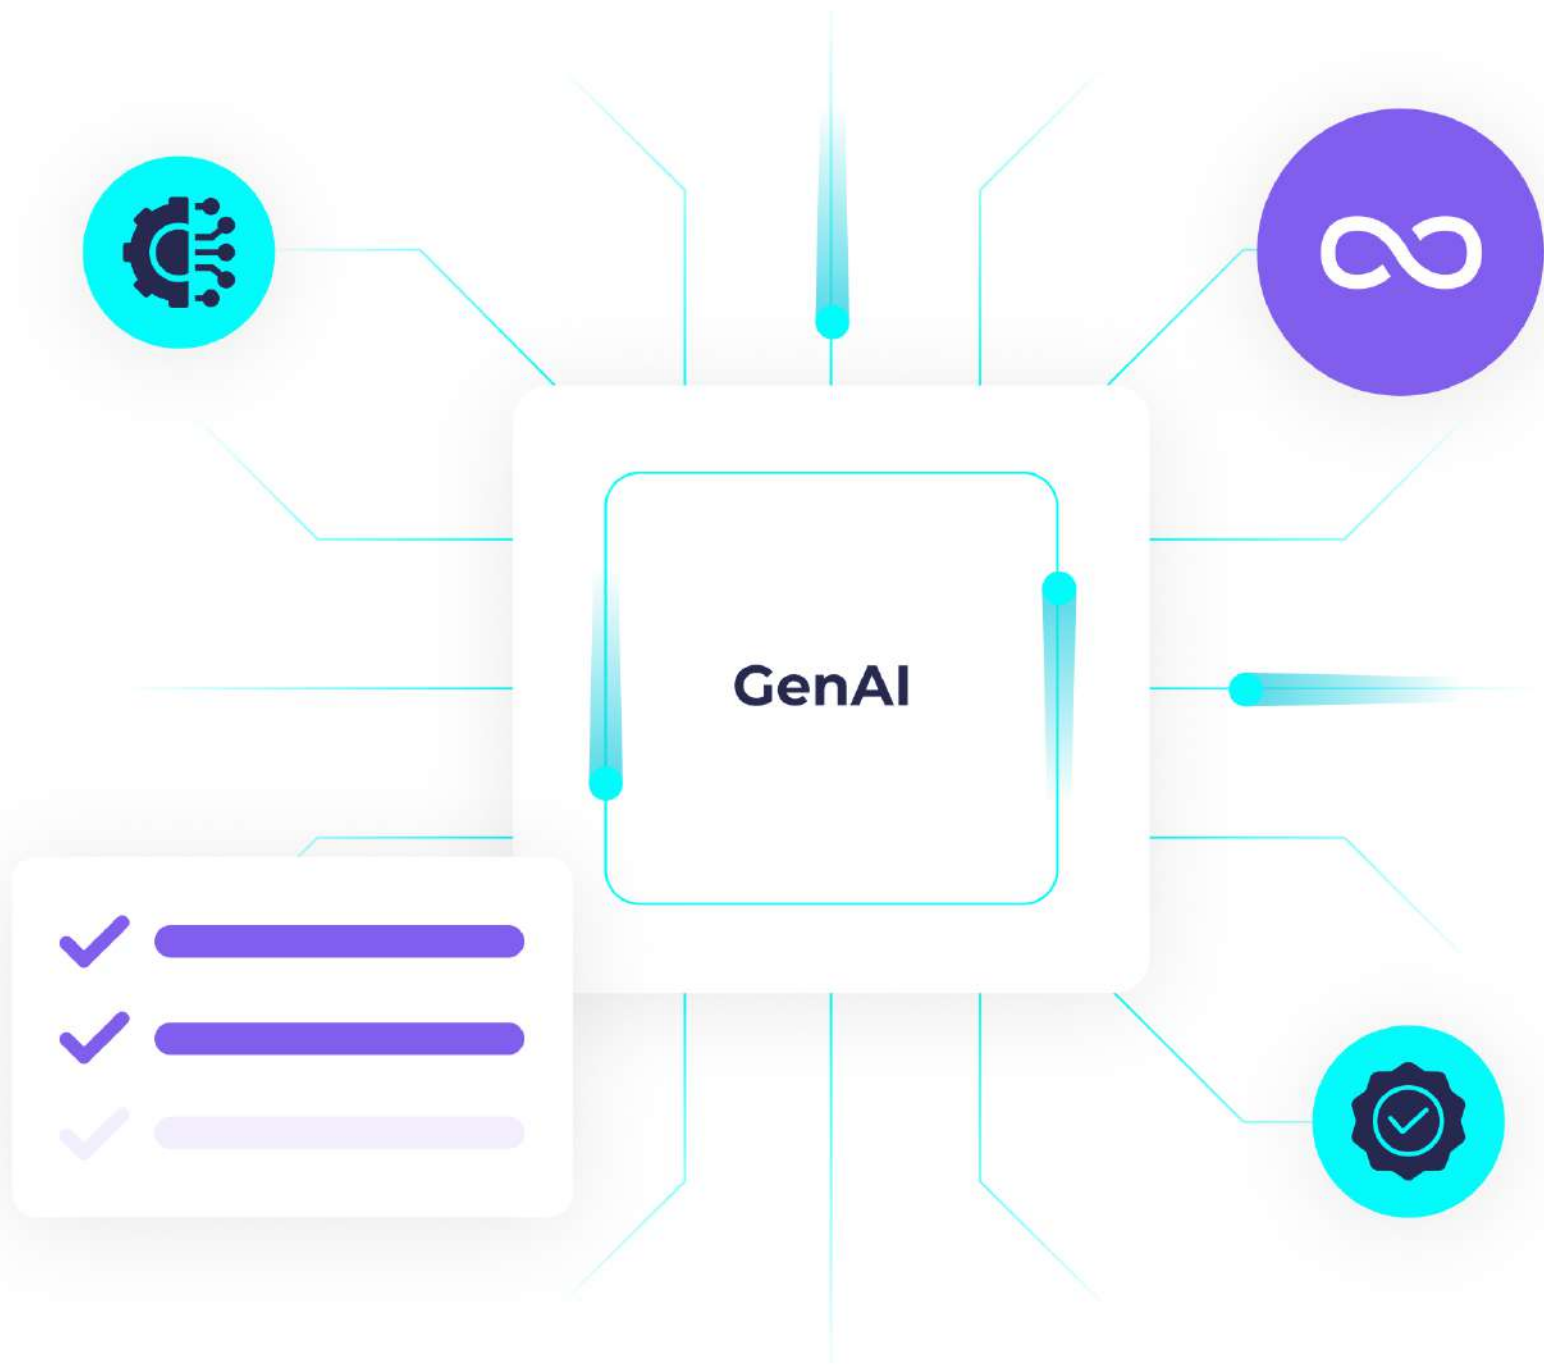

Generate realistic test data powered by AI that ensures faster, more secure and continuously compliant development cycles.

Agile Software Development Powered by AI

Turning the Promise of AI into Reality

AI is essential for compliance, accuracy, and meeting business challenges. At Accelario, we use GenAI to transform test data management, enabling Data, DevOps, Engineering, and QA teams to boost productivity and ensure smooth operations. Our intuitive interfaces and self-service options make data management accessible to new roles, while our skill development programs unlock new opportunities, empowering your team to drive real business impact.

Empower Your Business with AI Innovation

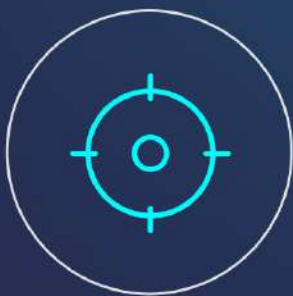

Improving Efficiency

Test data management processes are streamlined, leading to faster and more efficient operations.

Keep Compliant

In full compliance with data privacy regulations like GDPR and HIPAA, Accelario GenAI reduces the risk of data breaches and ensures that sensitive information is always protected.

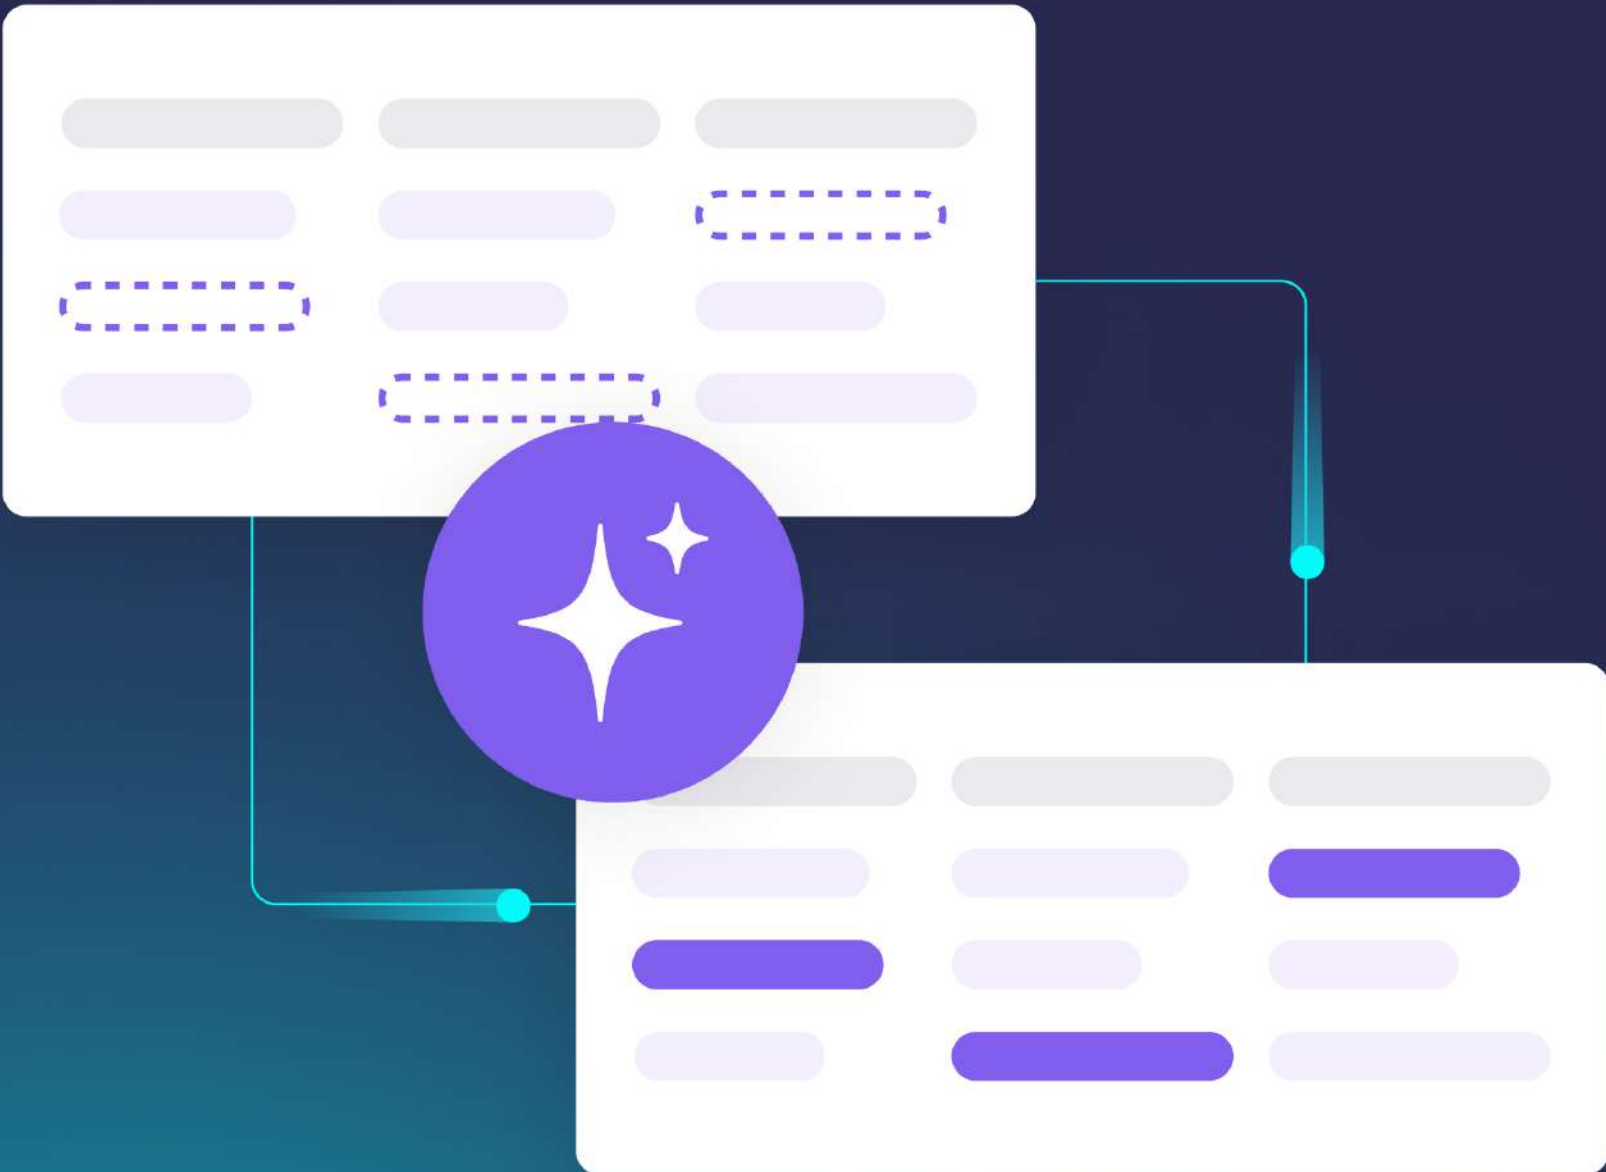

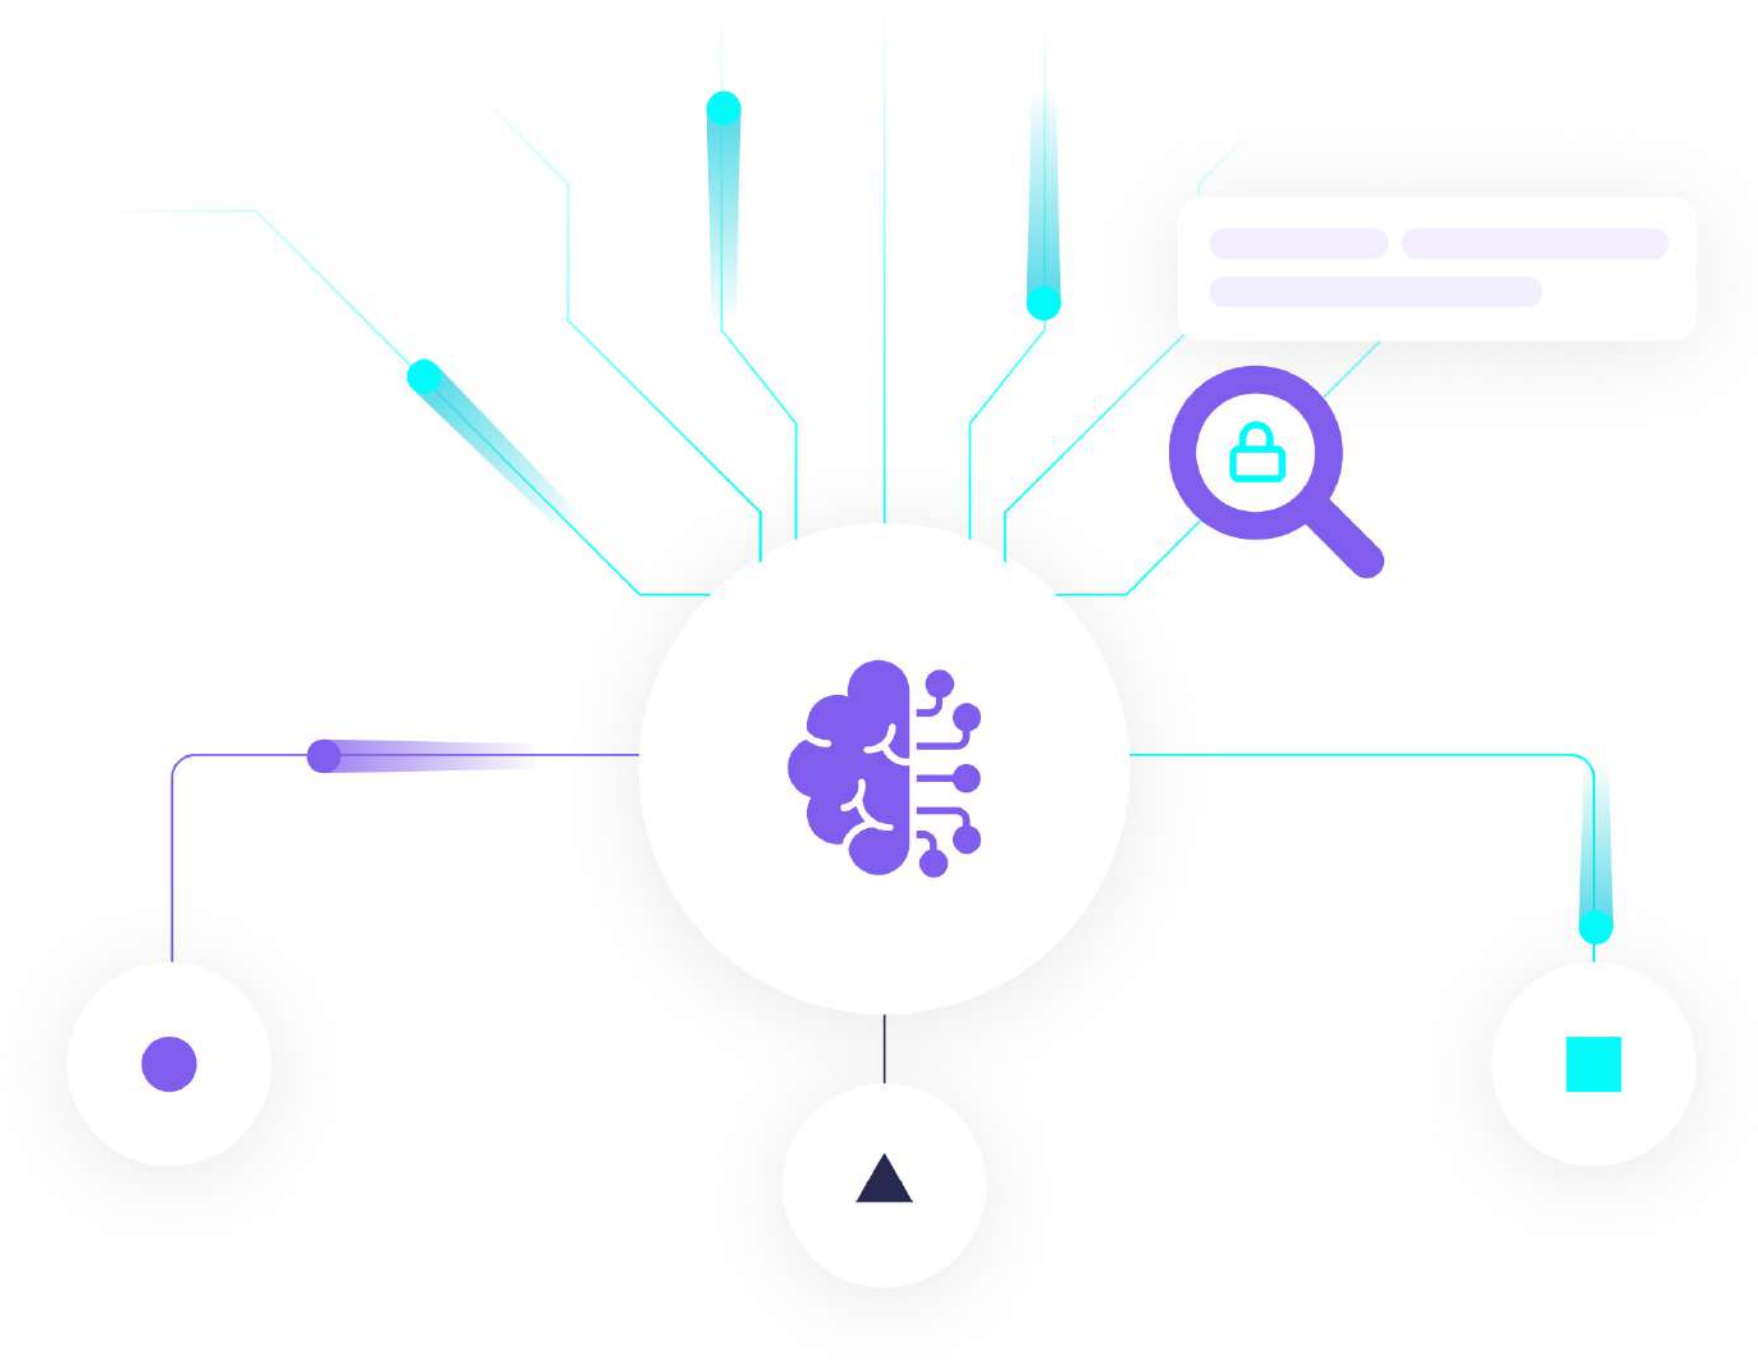

Enhancing Accuracy

With advanced AI capabilities, Accelario reduces manual effort, errors, and processing time, ensuring optimal data quality.

Categorization and Search Capabilities

Master Data with Generative AI

Achieve unparalleled categorization and search capabilities for sensitive data with Accelario's advanced AI integration. Our solution ensures enhanced result quality through a fully automated and streamlined process, significantly improving the accuracy and efficiency of sensitive data masking rules assignment.

AI Enhancement

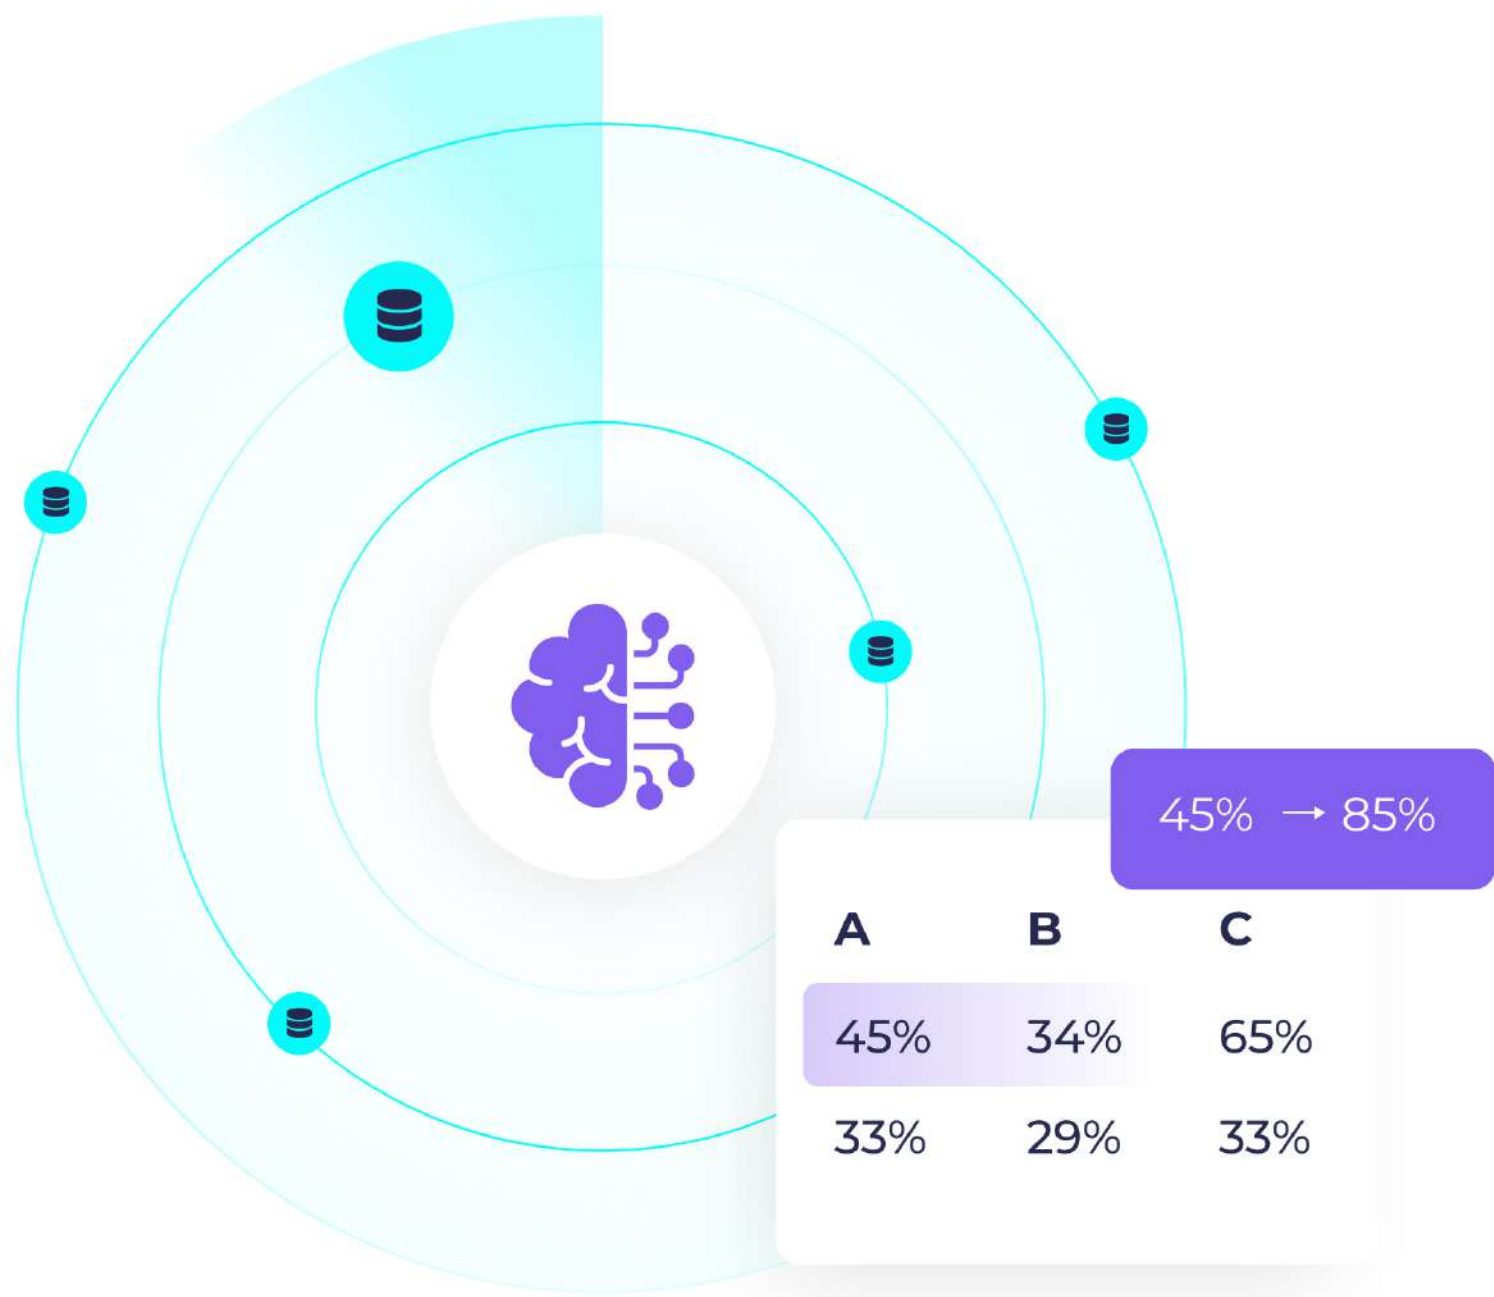

Ensure Precision in Every Detail

Experience the supplementary power of AI that refines results derived from non-AI methods. Our system connects AI assistance specifically for uncertain data columns with low probability, thereby reducing the inaccuracy and load on the system. In scenarios where non-AI rules fall short, AI steps in to enhance results, ensuring a higher degree of precision and reliability.

Automated Re-Scanning

Refine Data with Ease

Even without specific AI-only rules, our AI can enhance the results of applicable non-AI rules in cases of low probability. For instance, if a standard rule like "USA cities" provides a 45% probability for column "A," our service will re-scan with AI to improve these results. This enhancement, mainly applicable to lookup rules, has the potential to extend to all rule types, making AI a supportive layer that further refines outcomes.

45% → 85%		
A	B	C
45%	34%	65%
33%	29%	33%

Dictionary Generators

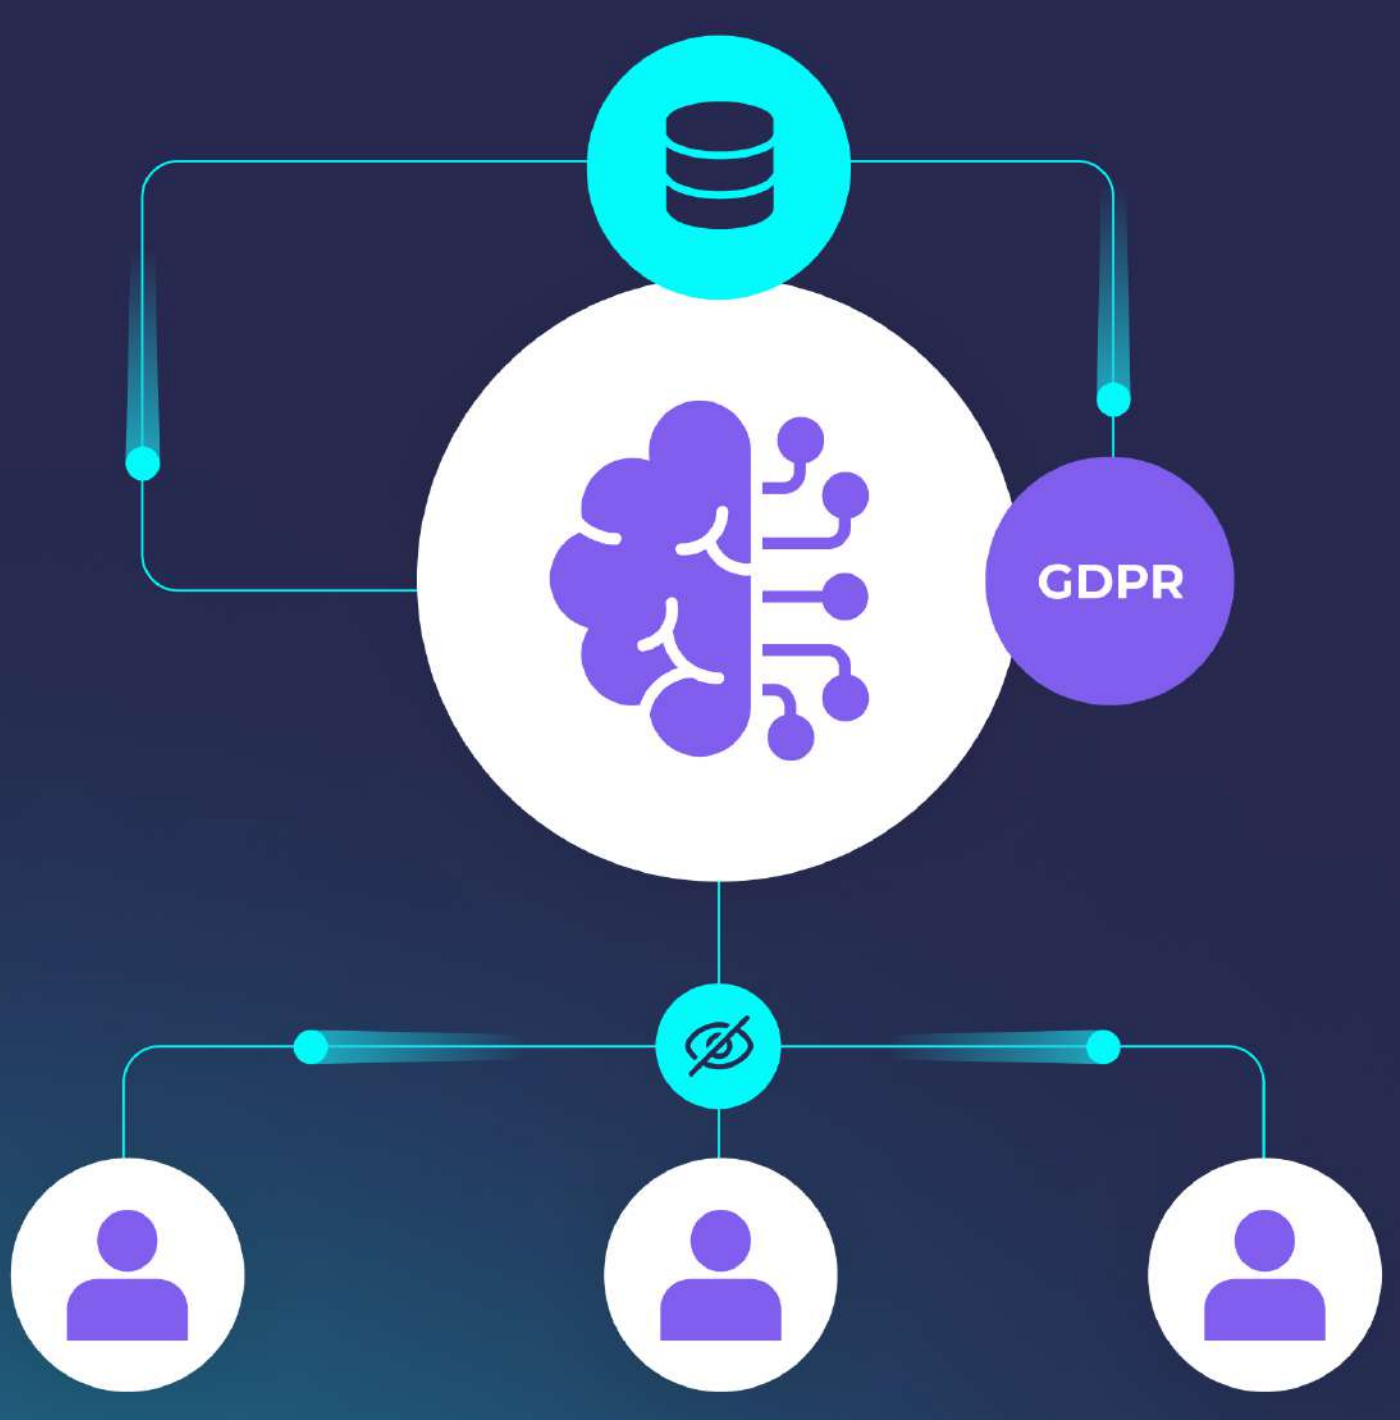

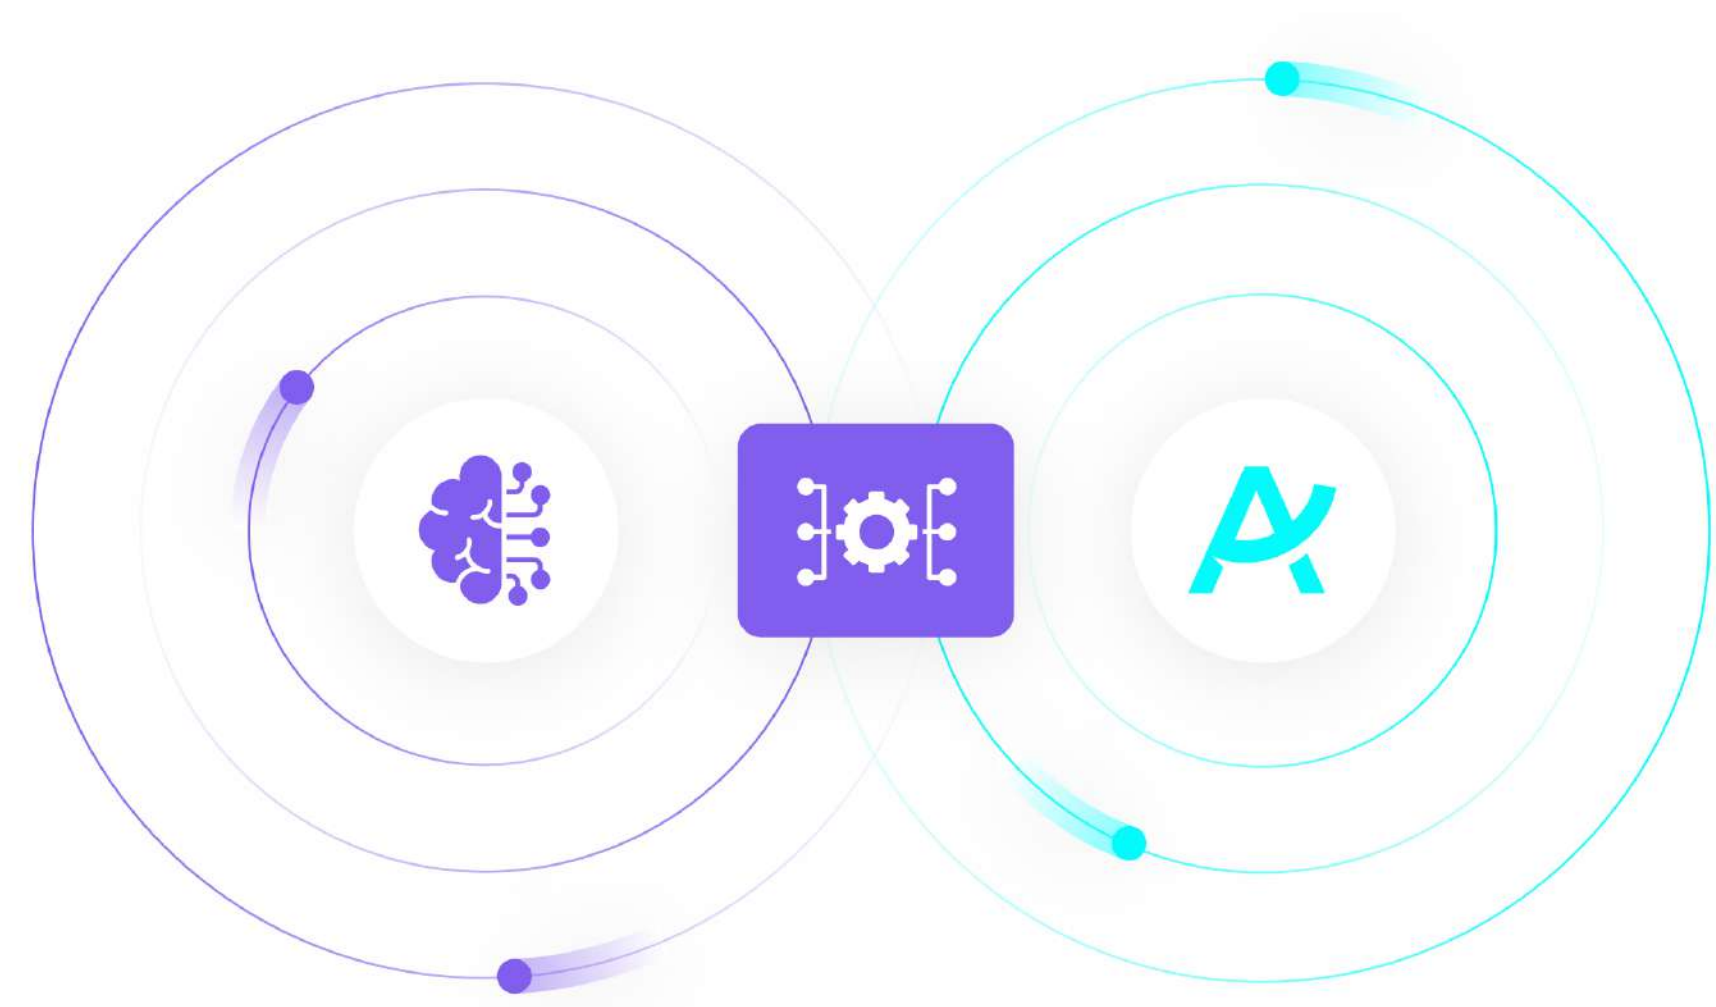

Generate Effortless Anonymization

Effortlessly generate masking lookup table content using cutting-edge AI technology. Our AI-driven approach drastically reduces the time required for creating masking rules, streamlining the entire process and allowing for quick and efficient data management.

Adoption

Integrate AI into Everyday Workflows

Generative AI is a valuable investment, but its true potential is realized when employees actively use it. Accelario makes AI technology adoption smoother and more beneficial. With expert support, your organization can quickly adapt to changing circumstances, ensuring successful software adoption and maximizing business value.

Ethics

Uphold Ethical and Responsible AI Practices

Powered by GenAI, Accelario minimizes human intervention, reducing potential biases and errors. The focus on transparency and accountability in AI operations further promotes trust and reliability, ensuring that your teams can embrace AI technologies confidently while adhering to ethical standards and regulatory requirements.

Our Customers Enjoy Fast Software Delivery

Thanks to Accelario we have been able to speed up our software development process while protecting production data with strong masking functionality. Our development teams can now easily create their own test environments with refreshed data autonomously and efficiently using the platform's virtualization capabilities.

Jose A. Medina Cano

DIRECTOR OF INFRASTRUCTURE, CYBERSECURITY & SYSTEMS

The Proof is in the Product

Join DevOps, Data & Software Engineers, and QA teams leveraging database virtualization and data anonymization to release faster and more securely.
