The Rise and Rise

of Banking-as-a-Service

Banking-as-as-service (BaaS): the provision of complete banking processes as a service from API-based, cloud-native platforms that use a licensed bank's infrastructure to deliver a financial service at the point of customer need, i.e. embedded finance.

\$3.6trn

the BaaS market is set to grow significantly by 2030

BaaS deconstructs the old, traditional FS model and places its building blocks in the hands of a wider range of stakeholders

The value chain

Brand or consumer of BaaS

BaaS provider

License holder

(and/or embedded BPO)

Bank API

Banking capability

BaaS has accelerated in the past 3 years

92%

say BaaS is a faster way to bring products to market than building in-house

80% say BaaS is a way to extend reach

into new geographic markets instead of building in-house

76% of respondents say more likely to

use BaaS as a route to market since COVID-19

The BaaS stack – an example

Embedded journeys

Intelligent services

Buy, insure, service and run

Brand / BaaS

Provider

License Holder

Car loan affordability **Financial products**

my car

Capabilities

Credit scoring

Domestic/international payments

Transactional rails

Banks see BaaS as a way to complement their core offering but for some, it is becoming just as important.

Software-as-a-Service (SaaS)

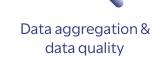

To compete in this brave new world of BaaS, digital transformation

is an imperative, not a choice.
