

Open Banking and Open Finance are operational reality. Innovative use cases are driving consumer adoption and transaction volumes are soaring.

With Konsentus, be both open and secure when engaging with other ecosystem participants requesting access to your customers' data and funds.

Scalable, extendable and robust, our award-winning SaaS solution, Konsentus Verify, empowers our customers to automatically validate the identity and regulatory authorisation status and permissions of any access requests in real-time.

By applying the applicable rules, whether regulatory, scheme or bi-lateral, we enable our customers to make the right decision each time an access request is received.

Trusted Data

Regulatory data continuously sourced from the legal systems of record.

Risk Reduction

Access requests verified in real-time, to protect against data misuse.

Cost-Effective

Complexity removed for real bottom-line benefits.

Rapid Deployment

An easy-to-deploy service - from sandbox to go-live in a couple of weeks.

Reliable

A cloud-based API for scalability and availability 24/7.

Long-Term Solution

Future-proofed technology, easily adapted for open finance and open data.

Removing the complexity

Knowing how to interpret and understand inconsistencies and gaps in the data is time-consuming, costly and requires continual maintenance and support. We remove the friction by:

- ✓ Validating digital credentials and regulatory permissions in real-time
- ✓ Sourcing our data directly from the 115+ legal systems of record
- ✓ Logging all transactions for dispute resolution
- ✓ Complying with the relevant Schema
- ✓ Powering our technology to withstand regulatory change (EEA PSD3, PSR, FIDA etc)

Konsentus Verify

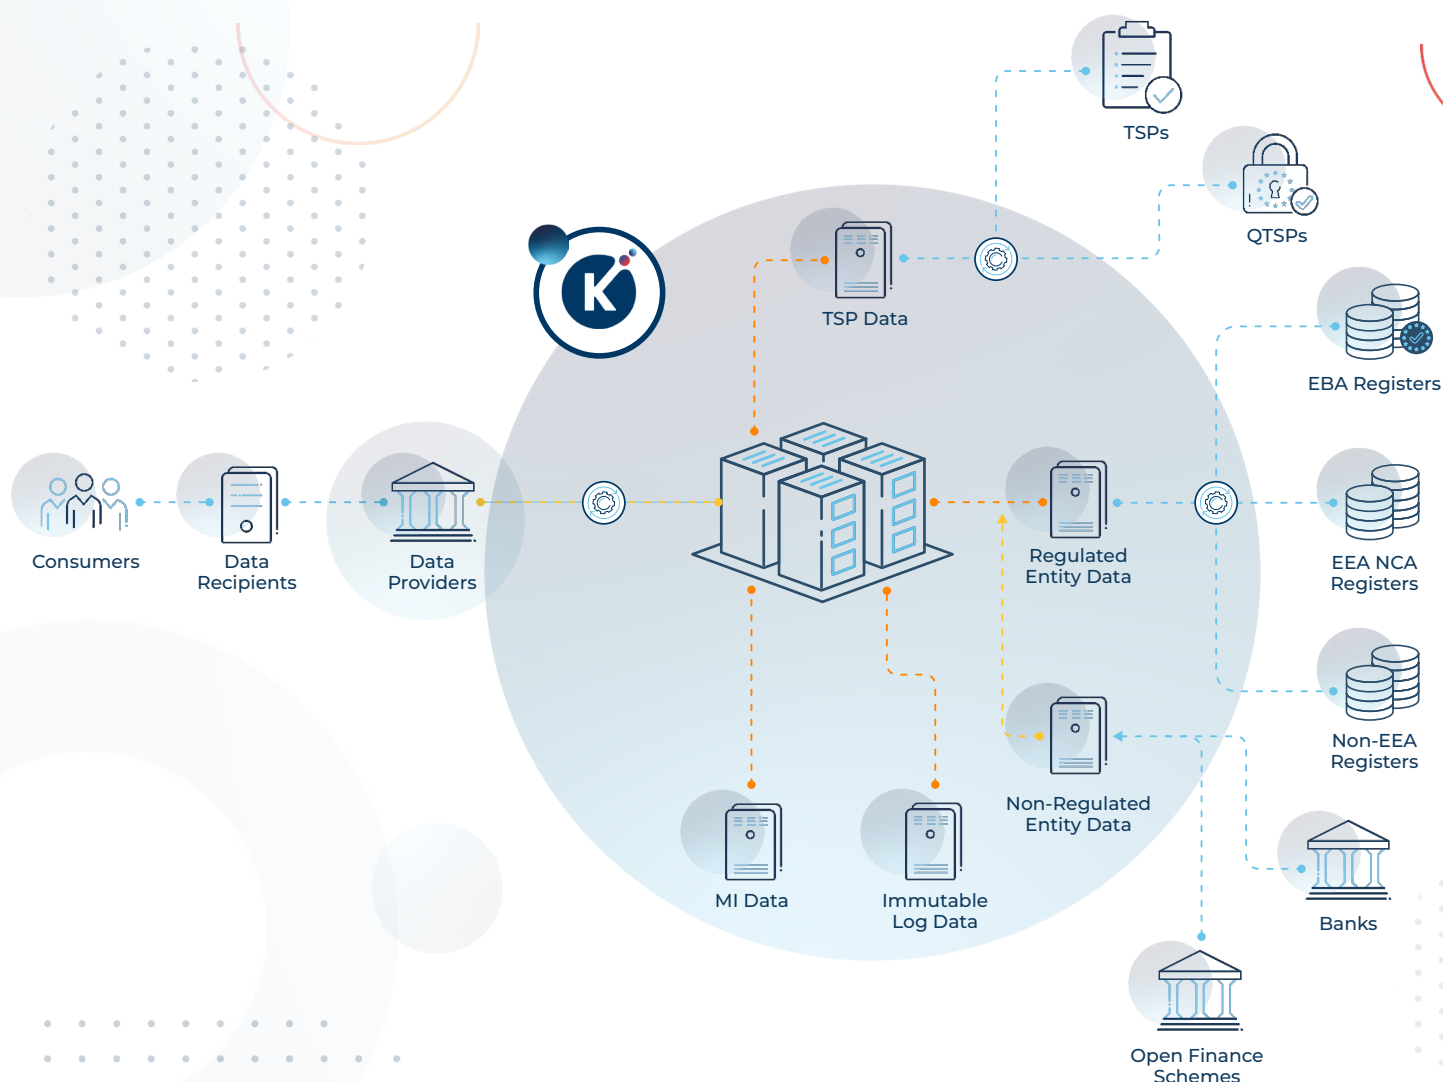

TPP verification you can trust

Konsentus Verify solves the issues facing financial institutions each time an account access request is received from a third party.

When the request is made, Verify connects to all the databases and registers across the EEA and the UK to source the latest available ID and regulatory data on the third party provider (TPP). The consolidated information is passed back to the financial institution through a single API in real-time, enabling an informed risk management decision to be made.

We ensure account access is never granted to unauthorised or fraudulent third parties, giving the end-user the highest degree of protection.

Konsentus has been a leading force in open banking since our foundation in January 2018. We continue to be at the forefront of industry change, guiding our 250+ customers seamlessly into open finance, open data, and beyond.
